

Liiu, designed by VANTOT for Luceplan: selected for the ADI Design Index 2025 and now the protagonist of a new configurator

Liiu, designed by the Dutch studio VANTOT for Luceplan, has been selected by the ADI Permanent Design Observatory for inclusion in the ADI Design Index 2025, an important honor that opens up the possibility of competing for the Compasso d'Oro Award in 2026. One year after the selection of J-us by Alessandro Zambelli, Luceplan consolidates its commitment to research and innovation thanks to this new creation with a poetic and technological character, now also the protagonist of the new configurator.

15 October 2025 – Liiu is a lightweight modular lighting system, whose selection for the ADI Design Index 2025 confirms the ability of the brand – which has always relied on exceptional collaborations – to blend aesthetics and functionality in strikingly contemporary and versatile offerings.

Liiu is the embodiment of a perfect combination of the spectacular impact of its multiple configurations and their lightness, between functional quality and minimalist elegance, dynamism of forms and their stability.

Its basic structure is composed of electrified metal cables attached to the ceiling – held in constant tension by counterweights – and of lamp units positioned on the cables thanks to two very light arms that support the luminous head and feature a spiral at their extremity. In this way the structure of the lamp, besides performing a mechanical task by supporting the weight of the light sources, conveys the current to the LED module inside the head of the lamp, creating a soft, almost ethereal glow without ever becoming excessive.

This unusual suspension lamp system, available in preset or customized configurations, fully displays its great potential thanks to the new configurator launched by Luceplan to offer designers maximum creative independence in the definition of every single detail. After signing in, users can create completely new compositions, setting all the parameters in an intuitive way: in each translation, Liiu conserves its sculptural nature and its ability to generate a dreamy atmosphere that is always unique and new.

Luceplan, with Liiu, continues its path of experimentation with new languages of lighting, moving forward with a vision that combines design of forms and technology. Once again, the company has been assigned a prestigious honor on a national and international level.
